1. Read the passage given below :

20

1. All of Earth’s oceans share one thing in common: plastic pollution. Discarded plastic bags, cups, and bottles make their way into the sea. Today, it seems that no part of the ocean is safe from plastic trash. In recent years, oceanographers have searched in vain for a pristine marine environment. They have found plastic everywhere they have looked. “It is a common global problem, we can’t point to a single habitat or location with no plastic.”
2. Plastic harms wildlife and introduces dangerous chemicals into marine *ecosystems* — communities of organisms interacting with their surroundings. Once plastic enters the environment, it lasts a long time. Scientists are working to prevent plastic pollution from entering the sea.
3. When people litter, or when trash is not properly disposed of, things like plastic bags, bottles, straws, foam beverage cups get carried to the sea by winds and waterways. About 80 percent of ocean plastic originates on land. The rest comes from marine industries such as shipping and fishing.
4. In 2015, engineer Jenna Jambeck at the University of Georgia and other researchers calculated that at least 8 million tons of plastic trash is swept into the ocean from coasts every year. That’s the equivalent of a full garbage truck of plastic being dumped into the sea every minute. If current trends in plastic production and disposal continue, that figure will double by 2025. A report published by the World Economic Forum last year predicts that by 2050, ocean plastic will outweigh all the fish in the sea.
5. In today’s world, plastic is everywhere. It’s found in shoes, clothing, household items, electronics, and more. There are different types of plastics, but one thing they all have in common is that they’re made of *polymers* – large molecules made up of repeating units. Their chemical structure gives them a lot of advantages : they’re cheap and easy to manufacture, lightweight, water-resistant, durable, and can be moulded into nearly any shape.

11. One way to keep the ocean cleaner and healthier is through cleanup efforts. A lot of plastic waste caught in ocean currents eventually washes up on beaches. Removing it can prevent it from blowing out to sea again. Beach clean-up is ocean clean-up.

12. Cleanup efforts can't reach every corner of the ocean or track down every bit of microplastic. That means it's critical to cut down on the amount of plastic that reaches the sea in the first place. Scientists are working toward new materials that are safer for the environment. For example, Jambeck and her colleagues are currently testing a new polymer that breaks down more easily in seawater.
13. "Individual actions make a big difference," says Jambeck. Disposing of plastic properly for recycling or trash collection is a key step. "And simple things like reusable water bottles, mugs, and bags really cut down on waste," she says. Skipping straws or using paper ones helps too. Ocean pollution can seem overwhelming, but it's something everyone can help address. This is a problem we can really do something about.

1.1 On the basis of your understanding of the above passage, answer each of the questions given below by choosing the most appropriate option : $1 \times 5 = 5$

- (i) Percentage of ocean plastic that originates from land is :
- (a) 20% (b) 50%
- (c) 80% (d) 25%
- (ii) In which year did Jenna Jambeck and other researchers calculate that at least 8 million tons of plastic trash is swept into ocean every year ?
- (a) 2018 (b) 2015
- (c) 2005 (d) 2010
- (iii) Plastic is not biodegradable because it is made up of :
- (a) low atomic particles
- (b) tiny particles
- (c) strong big particles
- (d) large molecule polymers

1/1/1 5 [P.T.O.]

- (iv) Sea turtles eat :
 - (a) plastic bottles
 - (b) plastic bags and soda-can rings
 - (c) bottle caps
 - (d) chunks of foam cups
- (v) Scientists bought fish and shell-fish for examination at markets in :
 - (a) China and Russia
 - (b) Pakistan and Afghanistan
 - (c) California and Indonesia
 - (d) Australia and Brazil

1.2 Answer the following questions briefly : 1 × 6 = 6

- (i) Which articles made of plastic generally cause pollution in the sea ?
- (ii) How does plastic in oceans harm marine ecosystems ?
- (iii) How is microplastic formed ?
- (iv) Why is plastic compared to a sponge ?
- (v) What is the biggest impact of plastic pollution on sea life ?
- (vi) How are scientists trying to reduce the plastic pollutants ?

1.3 Answer **any three** of the following questions in **25-30** words each : 2 × 3 = 6

- (i) How does plastic waste enter the oceans ?
- (ii) How is it true to say that plastic is everywhere in today's world ?
- (iii) Which property of plastic makes it a problem pollutant ?
- (iv) What has scientist Jambeck suggested for having cleaner and healthier oceans ?

1.4 Pick out the words/phrases from the passage which are similar in meaning to the following : 1 × 3 = 3

- (i) unspoiled (para 1)
- (ii) long lasting (para 5)
- (iii) people working together (para 12)

[P.T.O.]

2. Read the passage given below :

1. Getting enough sleep is as important as taking time out to relax. A good night's sleep is essential for preserving the health of your brain and gives you the best chance to meet the coming day with a razor sharp mind. An average person needs about six to eight hour sleep a night – although it is also true that you need slightly less than this, as you grow older-another advantage of aging stress and sleep deprivation often feed on each other, since stress tends to make it harder for you to fall asleep at night and sleep deprivation in itself causes stress.
2. Eventually, too little sleep can dramatically interfere with the performance of your memory – something you obviously want to prevent. If you are not getting enough sleep, try going to bed 30 to 60 minutes earlier than your normal bed time for a few days. Lie down on the bed and try to relax by dissociating yourself from your daily routine work. This is normally enough to catch up on any sleep deprivation.
3. If, however, you suffer from insomnia you should seek the advice of your doctor. The chances are it is already affecting your ability to remember and recall information – and if you are struggling to improve your memory scores, this could be at the root of your problem. Prolonged periods of insufficient sleep can deplete your immune system, make you more accident prone and even cause depression – this can also reinforce a more negative outlook on life, which can contribute to your stress burden. The good news is that your memory and mood should automatically improve once you improve your sleep patterns. Tackle your sleep issues and everything else should fall into place.
4. Because stress management is so essential to maximize your brain power, if you are not in the habit of setting aside time to relax, make it a priority to do so. Even a minute or two of deep breathing can start to work wonders. Often the best ideas and memories can come to you when you are in a state of relaxation as it is during these moments that your brain stores, processes and plays with the information it has received.

5. Meditation has long been part of religious and spiritual life, specially in Asia. Today, more and more people are adopting it in Western countries also, for its value in developing peace of mind and lowering stress. There is some evidence that regular meditation can have real sleep gain and health benefits particularly in terms of protecting your brain against aging.
- 2.1. On the basis of your understanding of the above passage, make notes on it using headings and subheadings. Use recognizable abbreviations (wherever necessary – minimum four) and a format you consider suitable. Also supply an appropriate title to it. 5
- 2.2 Write a summary of the above passage in about **100** words. 5
